LEXUS

INTELLIGENCE SIX

16

For Lexus, creating a flagship sedan is about much more than making a luxury vehicle. It goes without saying that it must symbolise Lexus, but it must also define the luxury car of the future, crystallise Japanese culture, and serve as an exemplary car to the world that exceeds customers' imagination. To realise this, in developing the LS we focused on the fusion of its personality and emotional appeal as a flagship

sedan, with performance that delivers the pinnacle of elegance, comfort and environmental friendliness, and perceived qualities defined by unique Japanese Takumi craftsmanship and advanced production technologies. We invite you to experience the LS and the future of Lexus with all your five senses.

EXTERIOR

Expressing the design concept
"Sensual Aggressive", the exterior fuses
sensual beauty with the low centre of gravity o
a refined platform to generate anticipation of
dynamic driving performance, endowing
a unique presence that delivers the style
and personality befitting
a flagship sedan.

INTERIOR

Designed around the concept
"Progressive Comfort", the interior
combines a cockpit for focused concentration
on driving with exquisite relaxation befitting
an exceptional luxury sedan. The highly
refined features and finish that evoke the
aesthetic beauty of Japanese crafts,
imbue a unique interior that appeals
to sophisticated
sensibilities.

3.5-litre V6 twin turbocharged engine (V35A-FTS)

Developed exclusively for Lexus, the core engine platform was redesigned and high-speed combustion technology and a high-efficiency turbocharger utilised to deliver exceptional power output together with outstanding fuel efficiency. The engine generates maximum torque starting at low rpms, providing powerful acceleration whenever the accelerator is depressed. Paired with the Direct Shift-10AT, the rhythmic shifting and direct response boost driving pleasure.

The hybrid system's V6 engine integrates advanced technologies that include Dual VVT-i (intake side: VVT-iW) and a D-4S fuel injection system. Lightweight components further contribute to both powerful driving and outstanding environmental performance. A focus on reducing friction losses in the engine helps boost peak output revolutions from 6000 to 6600rpm.*

Multi Stage Hybrid System

The Multi Stage Hybrid System's 10-speed shift control provides a direct acceleration feel that follows the increase in engine rpms, together with excellent shifting rhythm. The Multi Stage Shift Device varies the combined output of the engine and motor,

amplifying engine torque and increasing drive force by 24%. It utilises engine speed in a wide range from low to high speeds, harnessing maximum engine output from 50km/h, as well as enabling high-speed driving at lower engine rpms for a quiet ride.

Multi material body

To achieve high body rigidity, light weight and excellent safety performance, required optimising the layout and use of hot-stamp, high-tensile steel for major body components such as the rockers, pillars and roof. To lower the centre of gravity and moment of inertia, aluminium was used for the body framework located further from the vehicle's centre of gravity, hood, trunk lid, fenders, doors and suspension towers, endowing the body with excellent turning characteristics.

FR (Front engine, Rear wheel drive) platform

The LS takes advantage of the FR platform that Lexus refined for the LC to optimise front-to-rear weight distribution and the moment of inertia. The result is natural, smooth vehicle dynamics when cornering, accelerating and decelerating. The adoption of a low driving position and a layout that keeps the driver's hip point and the vehicle's centre of gravity close together minimises the distance between the driver and the axis of rotation, heightening the driver's feeling of oneness with the car. In this way, the packaging meticulously refines the inertia characteristics to deliver excellent response along with smooth, stable changes in posture during the sequence of movements involved in cornering.

Suspension

The development of a ball joint stud type cantilevered bushing for the rear suspension contributes to a sophisticated blend of handling stability and ride comfort.

Drive mode select

Drive mode select provides integrated control of multiple systems to let you tune performance to suit your driving style. You can select and change between five modes: Normal, Eco, Comfort, Sport S and Sport S+ Modes. In addition, Custom Mode enables drivers to set their preferred settings for the powertrain, chassis and air-conditioning.

Note: Vehicles pictured and specifications detailed in this catalogue may vary from models and equipment available in your area. Please inquire at your local dealer for details on the availability of features.

32

Together with its bold silhouette, the LED lamps symbolise the LS's flagship status. The narrow, slit-like 3-eye LED headlamps give the front face a powerful expression, which is heightened by the lasting impressions of the L-shaped LED rear combination lamps. The LS is designed so that through the actions of loading up your luggage, getting in and relaxing, you'll experience a heart-warming

feeling of convenience as you are enveloped in comfort. In the cabin, comfort-oriented functions provide exquisite relaxation, from the seats and air conditioning to the music and other entertainment features. Lexus hospitality has been carefully conceived down to the fine details to transform time spent in the LS into an exceptional experience.

Headlamps

The ultra-compact 3-Beam LED headlamps combine advanced design with excellent light distribution. 16 LEDs in the sequential turn signal lamps illuminate sequentially in a flow from the inner side to the outside of the vehicle.

Hands-free power trunk lid

Even if both hands are full, when carrying the Electronic Key you can open and close the trunk lid automatically by moving your foot under the rear bumper.

An outer sliding mechanism slides the glass above the roof to create a spacious open

feeling in the rear seats.

Rear combination lamps

All the rear combination lamps are LEDs, including the lamps on the trunk lid. The sequential turn signal lamps illuminate in a sharp, well-defined flow.

Sculpting the inside of the mirror visor gives it a sharp shape, and creates more space between the mirror and front pillar, enhancing aerodynamic performance and reducing wind noise.

Trunk space*

The Executive variant offers 440 litres of space while the Luxury variant accomodates 480 litres respetively.

^{*} Luggage space calculated using the VDA method. Luggage space varies for Note: Vehicles pictured and specifications detailed in this catalogue may vary from

22-way power rear seats and power ottoman*

The power rear seats use motors and a newlydeveloped pneumatic system that inflates and deflates air bladders to make fine-grained adjustments to every aspect of the seats. The rear seat behind the front passenger's seat has a maximum 1020mm of foot room and a power ottoman that provides generous support to the lower legs so the occupant can relax in refined comfort. In addition, three position presets allow the occupant to choose their preferred posture. "Business" is the normal position. "Entertain" reclines the seatback to a relaxing angle and positions the front passenger's seat for optimal viewing of the rear seat display. "Relax" moves the front passenger's seat to the forward-most position and deeply reclines the rear seatback to optimise the rear seat space.

Rear multi-operation panel

The multi-operation panel in the rear centre armrest puts intuitive control of the audio, air-conditioning, seat and relaxation functions, sunshades and lighting at your fingertips.

Rear seat entertainment system*

The rear seat entertainment system includes 11.6-inch displays that automatically adjust with the seat position to maintain an excellent angle for easy viewing, a Blu-ray Disc player, SD card slot, and a HDMI jack that enables the connection of a computer or other devices. Rear seat passengers can also enjoy videos, music and other media stored on mobile devices using Miracast or DLNA (Digital Living Network Alliance).

Mark Levinson QLI Reference Surround Sound System*

This newly-developed 16-channel 3D surround sound system drives 23 speakers. The 7 Unity speakers, ceiling speakers and QLI (Quantum Logic Immersion) surround technology fill the cabin with uniform sound quality, enveloping the listener in natural realistic sound with the precise positioning of a live sound stage, excellent separation and dynamic reproduction of sound sources.

12 speakers reproduce rich, powerful bass together with realistic vocals. Advanced processing technology corrects for excessive bass and produces clear sound even at low volume.

Cool box*

Air chilled by the rear cooler in the trunk space circulates through the cool box to keep items cool. Cool air vents allow the airflow to be switched on and off as required.

Relaxation seats with warming function (outboard rear seats)*

Air bladders integrated into the seat cushion and seatback are inflated to apply pressure to the occupant's back and thighs. The system also utilises dedicated heaters to promote relaxation through repeated warming and cooling. A total of seven programmes for both the entire body (Full Body Refresh, Full Body Stretch and Full Body Simple) and specific parts of the body (Upper Body, Lower Body, Shoulder and Lumbar) can be selected.

Power sunshades (rear doors, rear guarter windows and rear window)

The rear window sunshade covers the entire window on both sides with no gaps. Operation of the rear guarter window sunshades is linked with the rear door window sunshades to provide comfort and privacy in the rear seats.

28-way power front seats

The newly-developed pneumatic system provides finegrained support for every part of the body. Shoulder supports for the shoulder blades help steering operation. The upper body is also supported during cornering, enhancing the feeling of unity with the car. Hip support provides special support for the back of the hips, to help maintain posture during braking and cornering. Cushion side supports provide a high degree of grip, contributing to stable body hold during cornering.

Front refresh seats

Air bladders integrated into the seatback and seat cushion are inflated to apply pressure from the occupant's back to the thighs, contributing to a feeling of relaxation. Programs can be selected for the entire body as well as particular areas (Upper Body, Lower Body and Lumbar).

The Remote Touch Interface is designed for smartphone style operation. The cursor can be adjusted to stop following flick operation to suit the user's preferences. Pinch-in and pinch-out operation enables continuous in and out zooming.

Lexus Climate Concierge

_exus Climate Concierge coordinates with the 4-zone independent temperature control to automatically control the auto air conditioner with the seat heaters, seat ventilation and steering wheel heater to provide optimal comfort for each occupant. The body surface temperature of occupants is detected by IR (Infra-red Rays) matrix sensors to quickly provide the optimal level of comfort for all occupants. It also detects sunlight in the early morning and at sunset and controls the vehicle's climate control system to maintain comfort.

Easy Access Buckles (front seats)

To make the front seatbelts easy to use, the seatbelt buckle lifts up when the door is opened and then moves back down once the seatbelt is fastened.

Electronically controlled air suspension (with access mode)

In addition to the vehicle height adjustment function which can be switched between Normal and High settings, access mode automatically raises the vehicle to make ingress and egress easy.*1

Power easy access system

In addition to auto slide-away and return functions, the front seats feature auto lift-up function (Driver's seat only) and cushion side-away functions. For easy access, auto lift-up raises the seat lifter when the driver gets out and then returns it to the original seat position when the driver gets in. Cushion side-away opens the outboard side cushion supports to reduce the pressure on the thighs while getting in and out.*2

^{*1} To use access mode or to operate the air suspension while stopped requires

Note: Vehicles pictured and specifications detailed in this catalogue may vary from models and equipment available in your area. Please inquire at your local dealer for details on the availability of features.

Pre-Collision System

When the millimeter-wave radar and monocular camera sensors detect a collision with a vehicle ahead is likely, it alerts the driver and activates pre-collision brake assist when the driver depresses the brake pedal.

Assist

LKA (Lane Keeping Assist) and LDA (Lane Departure

LKA alerts the driver with a sensory alert using steering wheel vibration or a buzzer, and on the multi-information display if the system judges the vehicle is about to cross the lane markings without using the turn signals, and assists steering to help avoid lane departure.

AHS (Adaptive High-beam System)

When the system detects a vehicle within the area illuminated by the high beams, it disables/enables 8 upper and 16 lower LEDs on each side to partially block light from the high-beam headlamps so that they don't directly project onto a preceding or oncoming vehicle. In this way, it helps to provide the driver with good visibility by illuminating road signs and other objects in front of the vehicle, without dazzling other vehicles.

Adaptive Cruise Control

In addition to maintaining a constant speed,
Adaptive Cruise Control uses radar and camera
sensors to detect a vehicle driving ahead and
maintain an appropriate distance between vehicles.

Blind Spot Monitor System

When the quasi-millimeter-wave radars in the rear bumper detect vehicles in adjacent lanes that aren't visible in the door mirrors, the system activates an LED warning indicator in the relevant door mirror the moment a vehicle enters this blind spot.

RCTA (Rear Cross Traffic Alert)

To assist safe reversing, RCTA uses quasimillimeter-wave radars in the rear bumper to detect approaching vehicles in difficult-to-see areas behind the vehicle. When an approaching vehicle is detected, RCTA alerts the driver using a buzzer and an LED indicator in the relevant door mirror.

The innovative PUH helps to provide pedestrian protection in the event of a frontal collision, and at the same time enables a sporty design with a low hood line. When sensors mounted in the front bumper determine that the vehicle has collided with a pedestrian, the hood instantly pops up on four fulcrum points to create a space to help absorb the impact force.

LED cornering lamps/multi weather lights

The LED cornering lamps contribute to confident driving when turning left or right at night and in the rain by distributing more light in the direction of forward travel and to the sides. The multi weather lights help reduce glare caused by light from the headlamps projected forward when driving in fog at night, while providing sufficient light in front of the vehicle to give a good field of view.

Large color head-up display

The system helps the driver intuitively understand warnings and take action to avoid potential hazards with animations and information projected on the large 24-inch (600×150mm) display. The screen is divided into different areas to effectively bring information to the driver's attention including cautions and warnings, driving support, road signs, vehicle speed, navigation and other information.

Automatic rear seat reclining

When the rear seat is unoccupied, it automatically reclines in tandem with shift operation. If the headrest is raised, it also lowers to provide a wide field of view in the interior mirror.

12-SRS (Supplemental Restraint System) airbags

The LS features dual-stage SRS airbags (front seats), SRS knee airbags (front seats), SRS side airbags (front and outboard rear seats) and SRS curtain shield airbags (front and rear seats). SRS seat cushion airbags (outboard rear seats) are also available for the power rear seats.*

before you proceed.

**² The SRS airbags are supplemental devices to be used with the seatbelts. The driver and all passengers in the vehicle must wear their seatbelts properly at all times. Never install a rear-facing CRS (Child Restraint System) on the front passenger's seat. For a forward-facing CRS, it is recommended you use it in the rear seats. Please do not use accessories for the seats which cover the parts where the SRS side airbags should inflate. Such accessories may prevent the SRS side airbags from activating correctly, causing serious injury (Lexus genuine seat covers are specifically designed for models equipped with the SRS side airbags. To find out about availability in your area, please inquire at your local dealer). The photo shows all the SRS airbags activated for display purposes only (the SRS side and curtain shield airbags only inflate on the side of the collision in an actual accident). For details on these and other important safety features, be sure to read the Owner's Manual carefully.

Panoramic View Monitor

Video that provides the driver with an image of the vehicle as if viewed from above is displayed on the 12.3-inch EMV (Electro Multi-Vision) display. It helps the driver to check conditions around the vehicle that are difficult to see in real time.*

Side Clearance View: Helps the driver to check safe clearance to the side of the vehicle.

Cornering View: Helps the driver to check clearance when turning left or right on a narrow road. When the Side Clearance View is active, the Cornering View is automatically displayed in response to steering operation.*

Note: Vehicles pictured and specifications detailed in this catalogue may vary from models and equipment available in your area. Please inquire at your local dealer for details on the availability of features.

OWNING A LEXUS IS A JOURNEY IN ITSELF, ONE THAT IS JUDGED NOT BY MILEAGE BUT BY THE COUNTLESS PRICELESS MOMENTS.

BEGIN YOUR JOURNEY THE RIGHT WAY WITH QUALITY SERVICES DESIGNED TO ENHANCE YOUR LEXUS EXPERIENCE.

LEXUS believes that perfection lies in the details. When you purchase LEXUS ASSIST is a 24-hour roadside assistance service provided a LEXUS, you will experience service like no other. LEXUS CAPITAL offers you flexible financial services that enable you to be in full control of your finances, as always. Applying for financing can be handled guickly and conveniently at all LEXUS showrooms.

by LEXUS. You're assured of reliable assistance via this exclusive programme aimed at creating a hassle-free driving experience.

INSURANCE

(Z)LEXUS

ACCESS

LEXUS INSURANCE is a comprehensive motor insurance packaged by LEXUS to provide LEXUS owners with tailored insurance coverage for damages to the owner's vehicle as well as any liabilities incurred by the third party.

LEXUS ACCESS is a comprehensive vehicle leasing programme designed to bring you even closer to driving a LEXUS. Complementing our Flexi Plan and Islamic Financing Plan, LEXUS ACCESS offers you yet another option to experience the perfection embodied by a LEXUS.
